

IN THE CLAIMS:

Please amend claims 1, 21, 59, 96 and 97 as set forth below:

1. (Currently amended) A call processing platform for providing call processing services to multiple prison facilities, comprising:

a networking device connected via digital data links to call processing gateways at the multiple prison facilities, at least one of the multiple prison facilities located remotely from the call processing platform, each of the multiple prison facilities including multiple telephone terminals, the networking device receiving or sending data packets converted from or into call signals at the call processing gateways;

an unauthorized call activity detection system connected to the networking device for detecting ~~unauthorized~~ three-way call activity associated with calls placed using one or more of the multiple telephone terminals; and

a call application management system connected to the networking device and the unauthorized call activity detection system for processing and transmitting the calls from the multiple telephone terminals to a first telephone carrier network.

2. (Canceled)

3. (Previously presented) The platform of claim 1, wherein the data packets comprise voice over Internet protocol data packets.

4-11. (Canceled)

12. (Previously presented) The platform of claim 1, wherein said call processing gateways comprise voice over Internet protocol gateways.

13. (Previously presented) The platform of claim 1, wherein each of said call processing gateways provide at least one local area network interface for coupling with a computer workstation.

14. (Canceled)

15. (Previously presented) The platform of claim 1, wherein said call application management system communicates with said first telephone carrier network using digital data packets.

16. (Canceled)

17. (Previously presented) The platform of claim 1 further comprising a media gateway connected to the networking device for placing said calls on said first telephone carrier network using analog signals.

18. (Previously presented) The platform of claim 1 further comprising a call recording system connected to said call application management system for recording the calls.

19. (Previously presented) The platform of claim 1 further comprising a billing system connected to said call application management system for providing real-time call accounting.

20. (Previously presented) The platform of claim 1 further comprising a validation system connected to said call application management system for authorizing connecting of said calls to said first telephone carrier network.

21. (Currently amended) The platform of claim 1 further comprising:
a justice application management system connected to the networking device for managing inmates at the multiple prison facilities; and
a commerce system for managing commissary orders placed by the inmates at the multiple prison facilities.

22. (Previously presented) The platform of claim 20 further comprising: a call treatment system connected to the validation system for communicating with a signaling network of said first telephone carrier network to determine whether a call forwarding feature is activated for call numbers associated with the calls.

23-24. (Canceled)

25. (Previously presented) The platform of claim 21 wherein said justice application management system further provides investigative information with respect to said calls.

26-31. (Canceled)

32. (Previously presented) The platform of claim 1 further includes interactive voice response functionality for providing messaging associated with processing of the calls.

33-39. (Canceled)

40. (Previously presented) The platform of claim 1, wherein said first carrier network comprises a SIP (Session Initiation Protocol) carrier.

41. (Previously presented) The platform of claim 1, wherein said first carrier network comprises a MGCP (Media Gateway Control Protocol) carrier.

42. (Previously presented) The platform of claim 1, wherein said first carrier network comprises the PSTN (Public Switched Telephone Network).

43-58. (Canceled)

59. (Currently amended) A method for processing calls for multiple prison facilities, the method carried out in a call processing platform, the method comprising:

connecting with call processing gateways at the multiple prison facilities via digital data links, at least one of the multiple prison facilities located remotely from the call processing platform, each of the multiple prison facilities including multiple telephone terminals;

processing calls from the multiple telephone terminals received via call processing gateways for transmission over a telephone carrier network; and

detecting unauthorized ~~call~~ three-way call activity associated with the calls.

60-61. (Canceled)

62. (Previously presented) The method of claim 59, further comprising:
coupling said call processing platform to the telephone carrier network via an analog interface.

63. (Previously presented) The method of claim 59, further comprising:
coupling said call processing platform to the telephone carrier network via a digital
interface.

64-70. (Cancelled)

71. (Previously presented) The method of claim 59, further comprising:
recording the calls from the multiple telephone terminals; and
analyzing content of the calls for particular utterances to determine presence of threats in
the calls.

72-95. (Cancelled)

96. (Currently amended) The system platform of claim 1, wherein the call application
management system is further configured to processing and transmitting the calls from the
multiple telephone terminals to a second telephone carrier network, the call application
management system selecting either the first telephone carrier network or the second telephone
carrier network for transmission of the calls.

97. (Currently amended) The system platform of claim 96, wherein the call application
management system establishes connection for the calls over the first telephone carrier network
and switches to connection over the second telephone carrier network responsive to detecting a
predetermined event.

98. (Previously presented) The method of claim 59, further comprising:
selecting one telephone carrier network among multiple telephone carrier networks
connected to the call processing platform for processing and transmission of the calls responsive
to receiving the calls from the multiple telephone terminals.
